

SANATOR

Top Rated PDM Solution for Provider Groups

Preferential pricing available through America's Physician Groups

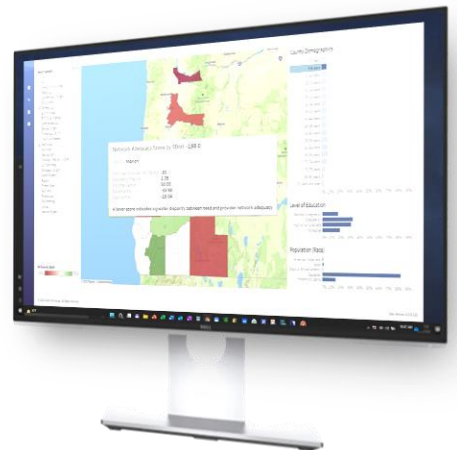

> Problem

Provider organizations maintain information about their contracted providers and employees in a variety of internal systems, files and databases. Many companies have stretched these systems to breaking-point, making it difficult to comply with increasingly arduous regulatory demands for reporting. Manual data management tasks consume available resources at the expense of higher-value activities such as provider relationship management and network optimization.

> Solution Overview

Sanator offers a single integrated repository for all your provider information supporting critical functions such as roster processing, credentialing, network adequacy and attestation. **Reduce or eliminate most manual data management tasks** and improve data quality with best-of-breed data governance. Sanator can integrate with existing systems and processes or replace ageing systems entirely.

to get started

Key Benefits

- Consolidate all provider, organization and network data into a single repository
- Reduce administrative overhead and free up valuable resources for higher-value activities
- Reduce the time and cost of credentialing by 50% or more
- Guaranteed 100% accurate identity resolution of providers and organizations
- Validation of key identifiers (NPI, License, DEA, board certifications, sanctions)
- FHIR server integration

How It Works

- Data extracts from your core systems are uploaded to the secure Sanator server
- Provider identities are positively resolved before data is validated against authoritative sources and standardized to a common format
- Provider data corrections and a comparison report is available in the Sanator portal after receipt of data
- Premium services including custom rosters, attestation, network adequacy reporting, and many others are available to Sanator Plus subscribers

> Custom Services

Sanator Plus subscribers may build their own custom package of premium services from Gaine and our partner network. We can work with you to assess your needs and recommend the optimal package.

Member Analytics

Analyze assigned lives from member roster files. Add member demographic and SDOH data for deeper insights

Credentialing

Achieve a dramatic reduction in credentialing time and cost with a full-service CVO and credentialing repository

Market Data

Seamless access to provider demographic and market data from third-party data providers to augment your provider data

EMPI

Patient/member identity management supported by an extensive reference database and best-of-breed matching.

Network Adequacy

Continuous monitoring of your networks against the prescribed network adequacy ratios for your health plan contracts

Partner Services

Access a growing library of services from contracted Sanator partners. See gaine.com/Sanator for more details
